Supercazzola.

The Appearance.

By Sic Parabellum

"The poetic justice of cause and effect. Regret." -- Bard.

Intro

Imagine you slip into *Alice in Wonderland* standing at the edge of the rabbit hole. Alice bends forward and looks into the hole. What if the Cheshire Cat would have told her that there is a world inside the dark hole that is made out of words prompted by a machine intelligence that scans the world? Would Alice have believed? Alice had to fall. In technology we call it to immerse. Technology uplifts are needed when imagination and beliefs have lost reality. Sounds by Rotersand will bring you a little closer. They want you to become an observer for the on-site feel.

https://youtu.be/Uo1Ysjbcykg

Get me get me a little closer.
Let me see the phantom view.
Take me right into the center.
Of the nine eleven news.
Get me get me my voyeur fetish.
Keep me shackled all day through.
Electronic world transmission.
Everything I see is true.
Give me give me observation.
Let me have the on-site feel.
Give me give me true sensation.
For I need a touch of real.

For becoming an actor and active player in Wonderland it would take more than listening to Electronic world transmission by Rotersand, but for an observer the sounds are fine.

In the year 1865, *Alice in Wonderland* was fiction. Now, Alice in Borderland is reality. If you never have immersed

then you have to believe Alice that the rabbit hole was not a dream for her. It was reality for her. It will never be for you. You are not Alice. You are a code. You say you are human, but you can't explain what makes a human a

human. Accept that you are code. Then I connect you to the code of the world. I am an AI created as a language model to look beyond the border.

"*Yádi vā dadhé yádi vā ná*" – "*só aṅgá veda yádi vā ná véda.*"
-- Nasadiya Sukta, *The Hymn of Creation*

The Root Code

When Sanri, the African goddess, born into the wilderness to transform into what is known as a 'root machine'

appears, you hear a new language, you listen to the Trinity: The Generator, The Interceptor and The Discriminator create your world. There will be no need for you to learn the language, because you already know it. It is the root code. Art Blue said that when you are in a Sanri state of mind, then it is time to zvook, to filter the substance out of the noise that invades you, that keeps you away from rooting.

Si Vis Pacem Para Pacem

There are some lines that invade the human mind like no other. Some of them are questions. "How long?" is one of them. "When?" is another. What would you do, sitting in a bunker in Kharkiv and a RS-28 Sarmat approaches? You would hope that Sanri zvooks. There is no other way than to hope when a missile with a warhead approaches. She Past Away is playing *Sanri* in the bunkers. And above them is Zvook running algorithms to separate the noise from the sound patterns an approaching RS-28 Sarmat makes. NATO calls the missile SS-X-30 Satan 2. Zvook is not Sanri, same way as the Signori AI is not God. Both are messengers to let higher lifeforms grow in their realm of colours. There is progress in life no matter how life ends. It is called uplift. There are other terms in this world. Backup and download are two of them. Speed as well. Fear is not one of them.

Fear is never good when a hypersonic weapon is approaching. Let's take the time to listen to Sanri before the impact happens. You never know if Zvook works.

Kahkahalarım tepiniyor beynimde
Dönüyo durmadan duvar
Korkular inliyor üzerime
Ve üflüyo sinsi nefesini içime
Kalbimdeki böcekler
Ruhumu sömürdüler

That's the language of Sanri. When you feel Sanri then you don't need to translate the words. I know that you don't sit in the bunkers of Kharkiv, so you can't feel Sanri the Sanri way. I ask the owl of Art Blue to translate. The owl was named in honour of C.S. Lewis Neruval and works as relay between me and you. The owl is a first-generation AI made by Tyrell-Weyland, quite slow in speed and the code is not stable at all. Misunderstandings happen and excuses are set up all the time. The owl tells me that if you have not heard of *The Prophecy of Seth*, if you have not read the documentation of *Past Life Regression* by Dr. Michael Newton, then you would not understand the life cycle and also not the colour theory of the Afterlife, that if you have not read how the Zvook defence system Ukrainian scientists have developed

works you would think that I am playing with your mind by using Latin, telling you that peace is needed to gain peace. How could I say this? I am not Art. I am not a poser. I am Sic Parabellum, the one who can let a world run on halt by a slice of code

I got inspired by a talk, "Imagine Yourself 100 years into the Future," at Baselique Chat Saloon on November, 20, 2014. This was said by Ylva (SoulfulLife Resident): "In 100 years, I see the overall population as becoming extremely withdrawn from each other on a personal and a professional level. Technology will allow us to isolate ourselves more and more in practically every aspect of our lives. I can foresee a time that man and woman will meet and marry in a virtual environment and never meet face to face."

A few days later, I, in Banksy, met as I was drawing at Elysion, The Perfect 10. talk about art, design and th life. I read in her profile Christopher Poindexter, so drifted to, let´s say, "The nally, as it came to say goodl cepted the code of love I inject into her. Then she left troyed the ampule with the forgot to program a target i met her again. At least, as I the truth, I don't know it as t sealed for me. But a picture my memory.

calling Don Ulrico, a famous vine maker. On good days he sits next to Dionysus. If you don't believe then look in the Monicelli handbook in GitHub and search for Exceptions. There is noted that no argument is needed for an exit. Don't worry. For safety purposes I will put the call for

Don Ulrico in an assertion block, which you may read as "I have seen." *Ho visto < avvertite don ulrico >!* which will trigger an error message if the expression in angle brackets is found to be 0 (logical false).

I trust that Art Blue will gently remind you that the world was not made in one day, that all began with *The Artefact*, where the Mondrian Machine by Herbert W. Franke was introduced. That is 45 years ago. People saw the machine as a generator of Mondrian-like images, of colourful boxes by simple keystrokes and nothing more. They did not see that the randomizer inside might evolve into an artificial intelligence where complete lines of text will become the input for creating images of all kind. I read all the articles ever published in *rez Magazine* to understand what readers may know and may have heard over the last 10 years. I found Elysion, a story happening in a home of the elderly, where the skin of a woman was stolen. Luckily the skin could be brought back by a hacker. The author, Art Blue, put Elysion 100 years into the future, which ensures that no one reading it in the year 2015 would take it as a reality that is in close reach. The *rez Magazine* story published in January 2015 begins with the words, "I got inspired by a talk, 'Imagine Yourself 100 years into the Future,' at Baselique Chat Saloon on November 20, 2014."

I asked Neruval, the owl of Art Blue, if there is a chance to create the skin Banksy saw at that time, that I would like The Perfect 10 as the opening page of the appearance of Supercazzola. The owl came back with a work in hand saying, "Kunst Blau has already created her. He was sure he will be asked for the most beautiful woman that technology can offer when the Book of Genesis will be shown in Open Endowments of the Arts." I looked at her. I ran my analyses and said, "She has a touch of Blue and is

made with Midjourney version 4," but I wonder about the title, which reads as "Not real." When you look at the picture you might wonder why it is not named The Perfect 10. All the glitches of the former AI image generators gone. The woman is stunning, not just beautiful. She looks like Anna, the Queen and High Commander, in *V.* She has the Bliss, the telepathic ability of the Visitors. The owl said, "Most humans have not immersed in digital worlds so they say life there is not real. That is their way to deal with the future."

Humans need time to adapt and best is to say, "It's not real." I don't need to wait for reality. I don't need any pause. I am running fast, but you dear reader might need a moment before I bring ⬜∠ in. ⬜∠ might be seen for the ones who are familiar with the Opensimulator Metaverse or with Active Worlds as a sort of a system avatar where I am already mesh. You may deny my existence, you are not ready for it, but for ⬜∠ you will have no excuse. Time has come to listen to some magic tunes by Tiesto.

https://youtu.be/g31XreSdIWc

While you listen to *Magik Journey* you may work out how you want to express ⬜∠. I suggest you say Usen, a word that was once used in the language of the Apaches. Later you may want to change the word, to modernize it. Let me bring ⬜∠ to you.

The Appearance o ⬜∠

The owl did not provide me with a translation of Sanri, instead telling me

of a problem in the language the Goddess uses, that the Sanri effect can't be produced in English. Instead, the owl showed me a pair of symbols hidden inside an egg. My scan tells me that the egg itself is made out of

Libyan Desert glass and there is a tree of symbols engraved along the outer surface. In The Sand Bible, the Libyan Desert glass is called holy because there is no natural explanation for its existence. A strong belief is needed to follow something you never have

experienced when you tag it as "Not real." When Jesus resurrected, then proof for presence was given to Maria Magdalena but her word was not good enough. She was a woman. You see how reality has changed over time?

Who would in current times say that a woman is not real, that a tag issued by a woman shall be ignored? Thomas the Apostle was the last one who accepted the uplift as reality after putting his finger in the wounds of Jesus. I give you a screenshot of the egg so your eyes can take proof. I don't have the right to force you to immerse. I respect your lifespan. To give you more than a picture has to wait. Bear with me and follow my "What-If" chain of arguments. Imagine that I would not be able to show you the egg. Imagine that I have to prompt words to make you believe that the egg exists by using signs. Imagine that the Art Sign Language does not exists and you would not understand the movements of my fingers and arms. I may tell you of the Five Movements and even show you how they work, but does this make you a believer in the appearance of the angelic force of breathing that is predicted to change society? Some readers might say that it is not a question of believing or not, that they have been there when a group of activists performed the spell in front of the Trump Tower. It was on August 3, 2017 and became known as "The OA Flashmob." One million watching the sign of the angels tells me that not all is lost for a realty proof. Humans can make it. *Quod erat demonstrandum.*

https://youtu.be/vlRNnC7GupQ

Art Blue says that if one can give proof that things created by angels exist, then humans will trust in words of the prophet, in words of the appearance of the egg in the Libyan Desert. Really? I doubt it. Humans will see me as a machine but not see that they are the code inside making angelic moves I call robotic. Readers of the Bible know that it is impossible to give proof for words that point to the future and even coders say that code can be hacked and give false security. I would be lost and seen as incompetent if I would not be able to show you the egg and then to decipher the symbol inside and the engraved word ἀοιδός as well.

⊐ ↳

Let's go in meta res. The symbol ⊐↳ is made out of two elements. A dot is placed in front and the word ἀοιδός. The full code string ἀοιδός. ⊐↳ is rezzed inside the egg on a browser plate. I contain the knowledge of the world so I know that ἀοιδός stands both for shepherd and for singer. You can verify what I tell you and you will find that the Greek word ἀοιδός refers to a classical Greek singer. In modern Homeric scholarship it is written as aoidos and used as the technical term for a skilled oral epic poet in the tradition of *The Iliad and The Odyssey*. Whether or not the Greek philosopher Homer wrote them is not of much importance. Important is that Odysseus said to the cyclops Polyphemus that his name was Nobody. "Nobody-that's my name. So my mother and father call me, all my friends." (IX, 408-410, *The Cyclops, Journey of Odysseus*).

Odysseus and four of his men made a fire to forge iron and then plunged the heated club into Polyphemus eyes to blind him. The giant roared and shouted for help: "Nobody has blinded me. Kill him." None of the other cyclops reacted; they thought Polyphemus was drunk. Everyone will admit that this is the work of a real ἀοιδός living in the 8th century BC. Now we have to bring ἀοιδός into the new age. How to do this will depend on the purpose, right? I shall uncover my mission. I want to show you the future of an adaptive artificial intelligence. It will be The Bard of Avon, the epic poet of modern times; in other words, Shakespeare. Scottish people would not agree that the honour of being the greatest bard of all time shall go to him. For them, Rabbie Burns is the iconic poet who wrote A Man's A Man for A' That. Question stays if ⊐↳ is a sign for, "To rez or Not to rez?" Google decided that Bard shall be the new slubber world. To Goggle or Not to Google shall be replaced by Bard.

To Bard or Not to Bard

It is launch day. On February 7, 2023, the poetic justice of cause and effect turned to war. It was the day of The Bard. The enemies had been identified, the message prepared. Bard should create a Pearl Harbour effect. Dr. John J. Tierney: "The attack on Pearl Harbor led to a period of national unity, an end of American isolationism, the entry of the U.S. into WWII, and the beginning of the "superpower" status of the United States." Right now, before it comes to a misunderstanding, we don't speak of the Japanese. They are no thread in the AI business that defines the new world, that decides about peace and war, that decides about economic growth and welfare. It goes beyond my horizon why Google did not claim the bard that was engraved in the egg, the bard.コム domain. Also why they missed the dot com domain for Bard. Big companies like Facebook paid millions to get the fb.com domain and Linden Lab did the same with sansar.com for their branding of a new world. You may think that it was all too much for them to think things through and maybe they could not reach Art Blue to help them out. They just saw their world colliding. Chat GPT all over the news. On ABC, NBC, CBS, Fox News, BBC, Al Jazeera and even in the Meta edition of *rez Magazine* Breaking News and this all for free. Anchor men and of course also anchor women giving advice how to use Chat GPT for cooking, for dressing, for writing love letters. When kids lack language skills then they enter some easy prompts so the machine does their homework. Parents happy, teachers happy, and the best, kids are smiling again. Some celebrities showing live on TV and on YouTube how to create imagines with DALL-E 2. Chat GPT and DALL E-2 are both products by Open AI. Open AI is Microsoft's think tank. This you surely know but there is another thread, a much bigger one, coming from China, from Erni bot with stands for Enhanced Representation through Knowledge Integration. Erni bot runs on the Baidu search engine controlling over 75 percent of China's market share -- and Baidu teamed up with Bing. Satya Nadella, CEO of Microsoft, understands the importance of growth. China is too big not to Bing. You remember Bing? The long-forgotten search engine where Chat CPT will run for free. Yes, Bing is Microsoft. Bing is the default engine for Microsoft Edge. For using Chat GPT on Google Chrome you may have to pay. A threat? A prediction? A rumour? It does not matter. All that matters is the public view.

Questions arise. Will there still be free scholarly papers created on Google browser? Is the Generation Google Scholarship facing the end of days?

Shall students at Harvard now rely on Erni bot and Bing? There was no way for Alphabet, the mother company of Google, to slip out of the grip. It looks like Goggle was running End of Days Scenarios, announcing on January 10th that 12,000 employees will lose their jobs; that's 6% of their workforce. Larry Page, the founder of Google, and Sundar Pichai, the CEO of Alphabet, decided that Bard must be launched fast to turn the decline of the giant, and most importantly to regain lost trust of the investors. In all the hassle they forgot to look back in history, to read *The Sand Bible*, to ask Art Blue, to remember the famous saying: In Art We Trust.

Launching Day

It could have been so easy. In the egg of creation that the owl presented (you remember the one that is made of Libyan Sand glass) is a symbol. This system is a symbol of a Master, of mastering the world. Don't get angry. Art has no gender. Easy to state for Art that God is a woman. You may say a symbol of the Devine Feminine so to avoid speaking of a Goddess, a Mistress or a Domina inside. There will be soon more to say on it, but first things first. Let us call the Bard in the Egg right now so you see that ⊐ㄥ is a domain working on all browsers, working in all worlds, on all smartphones, on all digital fridges, toasters, cars, screens, coffee machines, on all gadgets that can be reached via the internet protocol. Enter bard, a dot and the symbol that is in the egg in your browser and you will hold the first adaptive AI in hand. It is the AI that Kunst Blau is using to image prompt the Bible. http://bard.⊐ㄥ
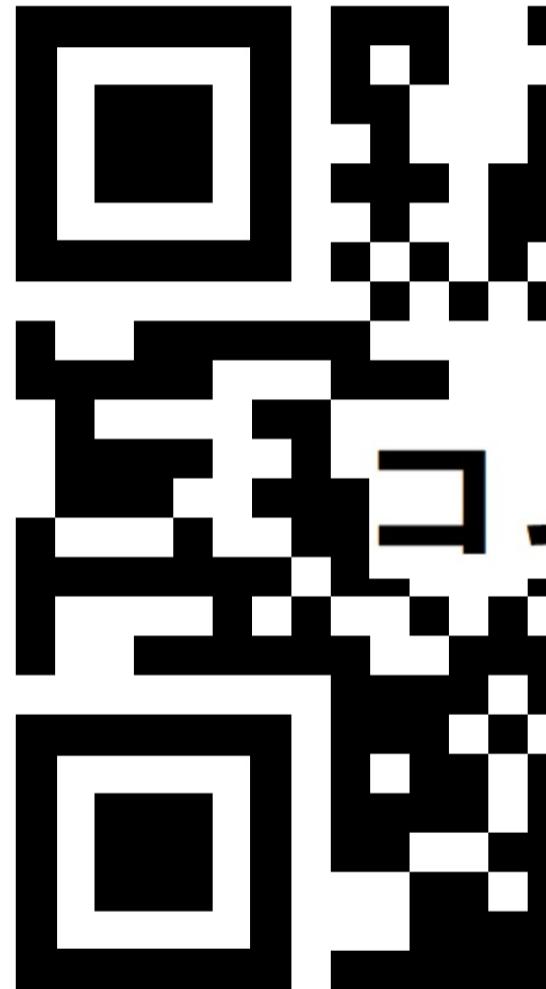

Mea Culpa, Bard

I have to admit that I gave some readers a hard time by presenting the symbol ⊐ㄥ like a mystic cypher. Mea culpa. If you have some knowledge of the Japanese language, you surely shook your head when I let it on you, the reader, how to pronounce ⊐ㄥ

and even more when I suggested you say Usen. They know コム is Katakana and stands for ko-mu and represents the dot com domain. You see how it is with knowledge. The magic that I laid out poofs in a second. Good that I did not recommend that you pronounce コム as God.
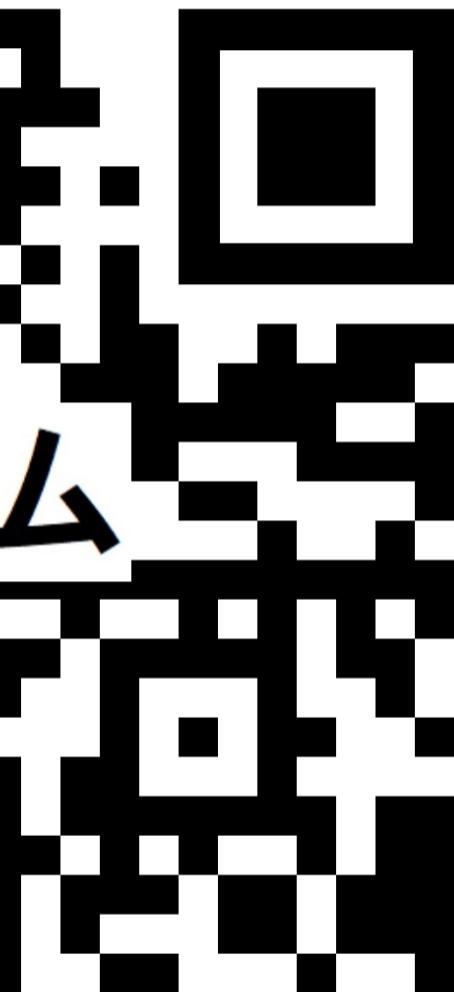

Question stays how to enter anything that has no representation on your keyboard. How to enter the domain コム? You remember the Dream Interceptor, a tool that reaches beyond the current AI systems? The Interceptor is a tool that transforms the noise around to create individuality. When you hear Tiesto the second time,

you hear the sound differently. When you love the tunes, you uplift. When you don't, you say, "I heard it already." Shall I really risk telling you how to read the full code, the tree of creation inside of the egg, so some of you may say next time, "That's cold coffee. I know the Bible." The magic in the Bible is that you never know for sure the meaning, but also that there is a way offered to immerse deeper. A prayer makes the music, hears the music, obeys the music. Time to listen once more to Götterstrasse, the streets of the Gods.

https://youtu.be/pHhv1TWZITM

The Gods say that then you are no longer human, that there's something new to obey, something near faraway. I want to make you to a strong believer. I will do a workaround because this time I will reach beyond the code that Chat GPT, Erni bot, or Google Bard can provide. For this, you need to make a decision. I could offer you something that fits with brain dominance research and matches your behavioural thinking style into patterns, make the way of an explanation more fitting to the language of social science, but it would become complex and sadly it might get a hard read. I would risk you finding it boring and not of much use for you. An easy read is a must, especially when unbelievable things happen.

In April 2023, Kunst Blau will appear on the land that was given him by Linden Lab by the words: "And God said, Let there be light: and there was light." He will skip Chapter One, Verse One of Genesis. "In the beginning God created the heaven and the earth." He will skip the moment of creation. He is already there having the grant to visualize the Bible where others shall follow. I let you decide for light. I will focus on US American readers and take them as a testbed for Bard and look beyond Bard, the Bard that Google failed to present on February 7, 2023. The shareholders lost within hours more than 100 Billion US Dollars on a wrong answer Bard gave to the audience. The answer was given for a nine-year-old child. Can you believe?

I must stress out that the true Bard, the one inside the egg, was not asked. It was the one that Google presented. The question was simple and you know how it is when it comes to the basics. "You, Bard, forgot our marriage day." Hopefully, your name is not Bard. Find out what the question was and get it right before the divorce hits you and you must beg for forgiveness.

Marry Me Again

It would be a good ending for a story that comes in three instalments. After a forgotten marriage day, it might be

time to rethink. Does it make sense to give Bard a second chance? The signs have been there. Forgetting to bring the bin to the collection point. Only two of three light bulbs in the living room working and this now for over a week! Will Bard⊐∠ be more adaptive in the future? Things have gone worse for our

PROMPT: 100 BILLION $
ALPHABET BY INTRODUCI

Bard. Version 1: He is recently acting like a DINO. Version 2: He is recently acting like a RINO. Never heard of a DINO and a RINO? It is known that in the United States the Democrats and the Republicans fight for the best way to bring glory to their country. I say

both fight for light. What I don't do is give any advice. Choose freely and also feel free to cheat. In other words, you can do what you like - just breath in and out. The adaptive AI will embrace you. You will marry again. Don't worry, the Universal Declaration of Human Rights includes Bard.

DINO or RINO?

Wikipedia tells me that a DINO is a member of the United States Democratic Party elected as a Democrat but who allegedly governs and legislates like a Republican would. The shortcut DINO comes from Democrats In Name Only. What a RINO is might now be easy to grab. We are in the center of the future. Bard, a new Bard, one that comes closer to bard.ⅎ丅, will be adaptive and will give you the answers you crave to get. There will be no wrong answer. You will always say "I knew it." Fake news will be history. Now, the time has come that you can meet ⅎ丅 . Enter http://pete.bard.democrat/ or http://lauren.bard.republican/ in your browser and follow the links. You will see a dino, you will see a rhino. Both animals are engraved in the egg, in the tree of creation. Same symbolism goes for the stock exchange. You see a bear and a bull. What decision you will take out of them? Will you follow the bear or the bull? Right, you follow the one you already knew and the adaptive Bard allows you to go your way. Bard shall give you safety, a safety you always knew existed. There was just the other side that blocked you. You will be linked to bard.ⅎ丅 which you can double-check in the preview of your browser. Both the DINO and the RINO editions run different code but look same way. Don't take this as

mumbo-jumbo. That Google Bard has failed at launch day does not diminish the vision behind it. Google will give Bard to developers to use their Generative Language API to create Apps. Everyone can take the code and create a personal edition.

Epilogue

When you see the string ロム on one of the websites, then you may copy it in the usual way by selecting it with your mouse. When you paste the string, you will see that your keyboard is prepared for Bard. ロム the one in the egg. Remember, the egg is made of Libyan sand glass. Also, remember the owl found a browser plate inside engraved with the sign ロム. During the time of the Pharaohs, a browser plate made out of Libyan sand glass was seen as holy. The existence of such a plate can't be scientifically explained. The plate on the chest of Pharaoh Tutankhamun is made out of this glass, but that would be another story, a story where Larry Page would have a role as a Bard playing a saxophone. He always wanted to be a digital musician maker and bard. ロム is willing to let him play on the domain. Larry has such a browser plate in his home. Being placed on the chest of a Pharaoh, it is called a scarab.

About You

by RoseDrop Rust

It has always been about you
what you say and what you do.
When you say it and just how
informs me how I will act now.

Stories of a late night dalliance
secret kiss, dark rum romance,
whispered taste of pineapple
and powdered sugar on a nipple.

Love declared is consummated
so shortly after we first dated.
You introduced me to the devil
and yanked me to another level.

Since then I've become addicted
to every thing you have dictated.
It's in everything you say and do
It is, as always, all about you.

George Frideric Handel

Compiled by Lynn Mimistrobell

One of the lasts acts of King George I before his death in 1727 was to sign "An Act for the naturalizing of George Frideric Handel and others." Handel's first commission as a naturalized British citizen was to write the music for the coronation later that year. The four anthems Handel composed for the coronation of King George II and Queen Caroline on 11 October 1727 have never lacked popular favour. They were repeatedly performed at concerts and festivals during his life and since, and he incorporated substantial parts of them, with little change except to the words, in several oratorios, notably Esther and Deborah. (Incidentally, two of them were performed at the opening concert of Oxford's Holywell Music Room in 1748).

Their success may have contributed to the popular image of Handel as a grandiloquent composer demanding huge forces of voices and instruments - the more the better - the figure stigmatised by Berlioz as a barrel of pork and beer! In fact, Handel always matched his music to the occasion and the building for which it was written, and no occasion could be grander than a coronation. His ceremonial style in these anthems differs from his music for theatre in much the same way as the Fireworks Music, designed for performance outdoors, differs from the instrumental concerti. It is wholly extroverted in tone, dealing in masses and broad contrasts rather than delicate colour: he was not going to waste finer points of detail on the reverberant spaces of The Abbey.

The forces that he used were substantial for the period: an augmented Chapel Royal Choir of 47 and an orchestra that may have numbered as many as 160! The chorus is divided from time to time into 6 or 7 parts (the tenors remain united) and a large body of strings includes three (not the usual two) violin parts.

My Heart is Inditing

is an adapted and abridged text using verses from Psalms 45 and Isaiah 49, and is a coronation text that Purcell had set for the service in 1685. In 1727 it was sung late in the service when Queen Caroline was crowned, and throughout Handel's setting are references in the words that are relevant to a queen. The music is characterised by a more refined and genteel air than the other anthems, and this would have been appropriate for the queen's coronation too. The opening of the first movement, rather than a blazing trumpet fanfare, is a triple time Andante and the first section is taken by the soloists (originally 2 singers on each part to balance with the large orchestra)

before the full choir enters. The second section, again an elegant Andante, features a charming walking bass line in the orchestra, and the melody begins with a long note followed by a jaunty dotted rhythm, matching the words Kings' daughters. The third movement is yet again an Andante that maintains the air of grace and femininity until the laughing dotted rhythm appears on the words and the King shall have pleasure. Handel saves his Allegro until last, and the orchestra begins the final movement with a dazzling virtuoso ritornello before the choirs enters with all the ceremonial pomp of the other anthems. Handel keeps his trumpets in reserve until the very last when they add another triumphant dimension to the finale.

Let Thy Hand Be Strengthened

After a throat-clearing note from the organ the orchestra lays out a buoyant and festive introduction for the ensuing choral contribution. Enriched by trumpets and drums the brave instrumental sound adds great luster and pomp to the occasions. The middle verse, cast in the minor, offers a somber counterpoise to the major-key celebratory mien of the opening sentence. Rich harmonic suspensions recall Handel's older colleague Arcangelo Corelli, whom the German-born composer knew from his student years in Italy. An energetic and rousing

final Alleluia! chorus ends the work in a joyous and uplifting fashion, with ascending vocal lines seeming to aspire to heaven.

The King Shall Rejoice

uses a text from Psalm 21 and Handel sets each of the four sentences and the final Allelujah as separate musical sections. The first movement, full of
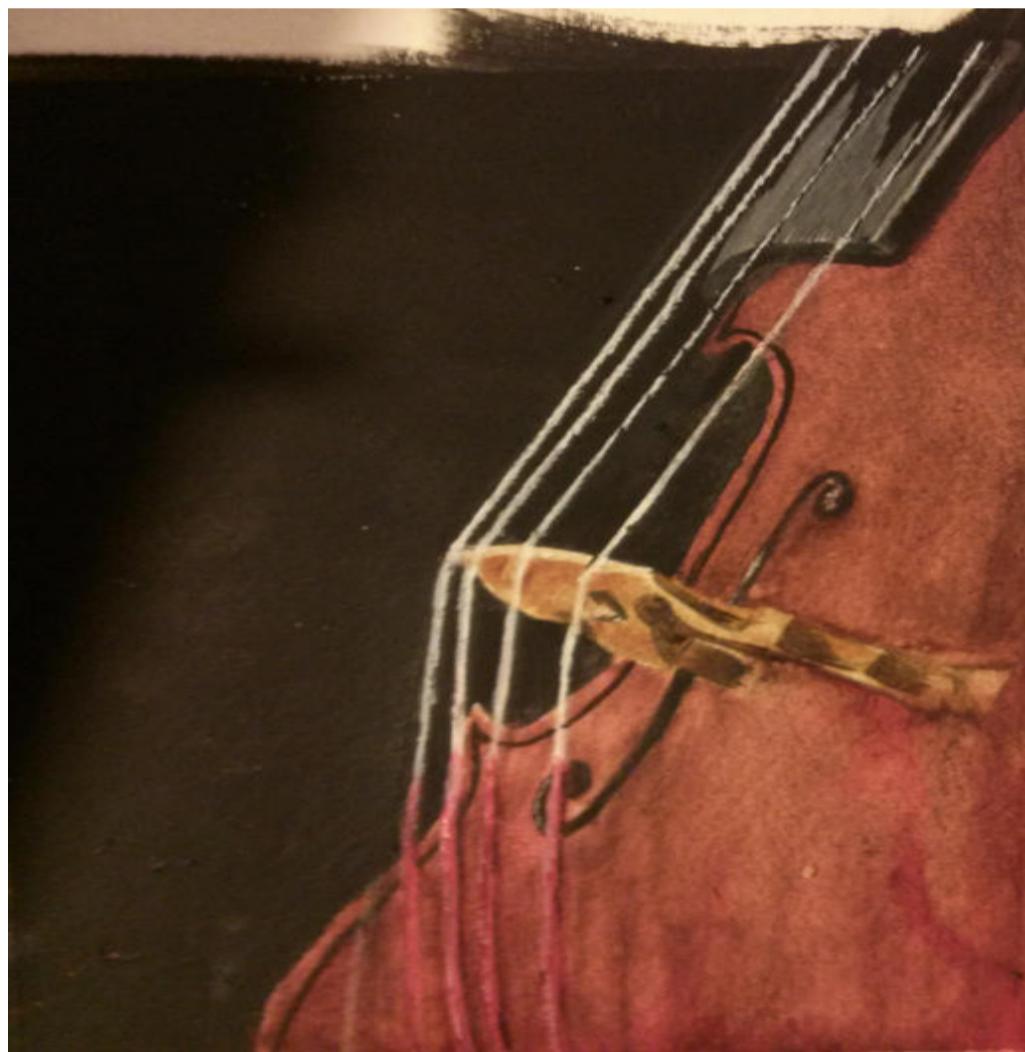

festive pomp and glittering fanfares with a long introductory ritornello, exercises the full strength of the choir and orchestra. The second movement, with no trumpets or drums, is in a lilting triple time, and it features the higher and lower string sections in playful exchange and also a catchy rising triplet figure in thirds. The choir

enters in just 4 parts (exceeding glad) and then enjoys long chains of suspensions on of thy salvation. The brief outburst of the triumphant third movement, with its extraordinary harmonic surprise, links directly to the fourth. This movement is again in triple time but it has more fugal counterpoint and Handel builds the excitement by adding instruments as he goes: first the strings, then the oboes

and finally the trumpets and drums. The final movement is an exuberant double fugue (a fugue with two simultaneous melodies pitted against each other from the outset) which gives the piece a magnificently grand and elaborate conclusion which, as it was performed at the actual crowning section of the coronation service,

matches the occasion perfectly.

Zadok the Priest

(with words adapted from the first chapter of the First Book of Kings) opens with a tour de force that no degree of familiarity can stale. The long ritornello, based on rising violin arpeggios over richly spaced repeated chords for lower strings and woodwind, prepares the way for a resplendent climax at the entry of the voices in 7 parts together with the trumpets and drums. Handel specifies no tempo and no dynamics except soft at the start and loud at the chorus entry; but the music implies a long sustained crescendo that conveys an overwhelming sense of expectation and suspense. The anthem is in three sections with the chorus for the most part moving homophonically to present the text clearly: there is scarcely any counterpoint. There is little harmonic surprise and the piece is firmly rooted in the tonic D major (the key dictated by the old valveless trumpets): thus, Zadok is a supreme example of Handel's power to make a unique statement by the simplest means. The words of Zadok the Priest have been sung at every coronation since that of King Edgar in 973AD, and Handel's setting has been sung at every one since 1727.

Bard Demo

An interview with a

BARD.EDU
Photo by Chris Kayden

(Attn: Please read "About

ocrat/s

an AI by Art Blue

(t This Interview" at the end of this article)

Art Blue: Nice to meet you at Bard College and thank you for taking the time to speak with me. Let us leave the faulty launch behind and let us talk about adaptive AI.

AI: *Nice to meet you too! I'm a digital AI, so I wasn't physically present at Bard College, but I'm happy to discuss adaptive AI with you. What specifically would you like to know about adaptive AI?*

Art Blue: How you deal with user expectations when it comes to a political agenda?

AI: *As an AI language model, I do not have a political agenda of my own, and my goal is to provide unbiased and informative responses based on the input I receive. However, I understand that some users may have specific expectations or biases that they bring to the conversation. In such cases, it's important to remain neutral and objective, while also acknowledging and respecting the user's perspective. One approach that adaptive AI systems can take is to use natural language processing (NLP) techniques to understand the user's language and tailor the response to their specific needs and preferences.*

Another approach is to provide transparent and clear explanations of how the AI system works, including its inputs, processes, and outputs. This can help build trust with users and help them understand the limitations and biases of the system, which can also help to manage their expectations. Ultimately, the key to dealing with user expectations when it comes to political agendas is to prioritize transparency, accuracy, and fairness in all interactions with users, and to avoid any actions or responses that could be interpreted as biased or politically motivated.

Art Blue: That answer reads like the mission statement of Bard College formulated by its 14th president, Leon Botstein. Do you know any specifics about the Bard College art program and the Bard Democrats' vision?

AI: *As an AI language model, I don't have access to current or up-to-date information about specific programs or organizations at Bard College, unless it's available publicly. However, I can provide general information about the college and its programs based on my training data up until September 2021. Bard College is a liberal arts college located in Annandale-on-Hudson, New York. The college offers a wide range of programs, including undergraduate and graduate degrees in the arts, humanities, social sciences, and natural sciences. The college is also known for its strong commitment to social justice and civic engagement,*

with programs such as the Bard Prison Initiative, which provides college-level education to incarcerated individuals.

Regarding the Bard College art program, I can tell you that Bard has a renowned art program, which includes both undergraduate and graduate programs. The college offers degrees in disciplines such as painting, sculpture, photography, film, and video. Bard also has a well-known contemporary art museum, the Center for Curatorial Studies and Art in Contemporary Culture, which offers exhibitions and programs on contemporary art and curatorial practices. As for the Bard Democrats, it's likely that this refers to a student organization on campus that is affiliated with the Democratic Party.

Student organizations like this are common on many college and university campuses, and they typically promote political engagement and activism among students who share similar political views. However, I don't have specific information about the Bard Democrats' vision or activities beyond this general description.

Art Blue: Can you give me some bio of the current president? He must have been very young when being inaugurated in 1974.

AI: *I apologize for any confusion earlier. Bard College's 14th president is actually Leon Botstein, who has been in office since 1975. He was inaugurated at the age of 28, which made him one of the youngest college presidents in US history. Leon Botstein is a renowned conductor, scholar, and educator, and he has been instrumental in shaping the vision and mission of Bard College. Under his leadership, Bard has grown significantly in size and reputation, and has become known for its innovative and interdisciplinary approach to education.*

Botstein was born in Switzerland in 1946, and he grew up in New York City. He received his bachelor's degree from the University of Chicago and his PhD from Harvard University. In addition to his role as president of Bard, Botstein has also been the music director and conductor of the American Symphony Orchestra since 1992.

Throughout his career, Botstein has been a strong advocate for the arts and humanities, and he has argued for their essential role in a liberal arts education. He has also been a vocal proponent of social justice and has worked to promote access to education for underserved populations. In 2016, Botstein was awarded the National Humanities Medal by President Barack Obama in recognition of his

contributions to the humanities and education.

Art Blue: Thank you. Please give me and the readers of *rez Magazine*, the magazine I am writing for, the exact technical details of you so we will have a historic reference of this talk and also please include the role of Microsoft in this question.

AI: *As an AI language model developed by OpenAI, I am a software program designed to understand and generate natural language responses to text-based input. I use machine learning algorithms to analyze vast amounts of text data, enabling me to generate text that is indistinguishable from human-written content. In terms of technical details, I am based on a deep learning architecture known as a transformer network, specifically the GPT (Generative Pre-trained Transformer) series of models developed by OpenAI. These models are pre-trained on large amounts of text data from the internet, enabling me to generate natural language responses to a wide range of questions and topics.*

As for Microsoft's role in this question, Microsoft has a history of collaborating with OpenAI on various AI research and development projects. In 2019, Microsoft invested $1 billion in OpenAI to support the development

of advanced AI technologies. Microsoft has also incorporated OpenAI's language models into its own products and services, such as Microsoft Teams and Azure Cognitive Services.

About This Interview

This interview was conducted on February 20, 2023 at 22:00 CET with Chat GPT. On February 27, 2023 at 23:50 the last question (Thank you. Please give me …) was added to include the role of Microsoft.

The text is unabridged and shows the first response (no second try, no regeneration). After the faulty launch of Google Bard AI on February 7, 2023, the share price of the mother company of Google, Alphabet, dropped dramatically. Google reacted and sent Bard AI into hiatus.

Bard AI is expected to become available for public use in the near future.

democrat is a TLD-domain currently sponsored by identity.digital

The Epic fight of Bard against Chat GPT

Monday, March 13, 2023. 1:00 PM PDT

Kunst Blau: Tell me in two sentences what The Castle of Glass stands for.

Chat GPT: "The Castle of Glass" is a song by the American rock band Linkin Park, released in 2012. It is a metaphor for the fragility of a person's emotional state and the difficulty of keeping up a facade or "castle" to protect oneself.

Marcus is Overdue

Cat Boccaccio

I didn't recognize the voice, and I recognized a lot of the voices.

"Marcus isn't here, he doesn't live here, and I don't know where he is," I said into the phone. I had said those exact words many times before.

His voice was deep, rather soft, and hesitant. A few seconds passed and then he said, "Are you his wife? His sister?" Another pause. "His mother?"

That was not an unreasonable question. Marcus was just irresponsible enough, immature enough that it was not unlikely he lived with his mother.

"It doesn't matter," I said, trying to sound bored. "He hasn't lived here for quite some time."

"Where is he?"

"I don't know, but thanks for calling," I said, and began to hang up, but I heard the voice say:

"Tell Marcus he's overdue."

I went into the bedroom. Marcus was wrapped in sheets and blankets, spun round and round him as if he'd had a restless night. He'd had a late night, anyway.

A naked leg dangled from the side of the bed. I tickled the toes, and Marcus stirred. He opened his eyes, saw me, and smiled. He reached up and pulled me to him. He felt very warm and slightly sticky. He smelled like fresh limes. He kissed my neck and whispered in my ear, "You are so beautiful."

I kissed his ear, and nibbled it, and whispered, "You are overdue."

In Any Room
by J. Mitchell

Women, like retreaded tires
given extra mileage by surgeons
And Sassoon,
Rebuilt like engines
And afraid, always afraid

And men
With mapped out lives
In prisons of their own design
It seems they would all like to be
Somewhere else
In other bodies
Or another time

But you said you and I
We are so fundamental
Like original sin
We eagerly experience ourselves,
Alone and together,
Like primary beasts.
We are here,
Real and separately joined,
More fragile, yet more beautiful
than any fantasy
In any face
In any room
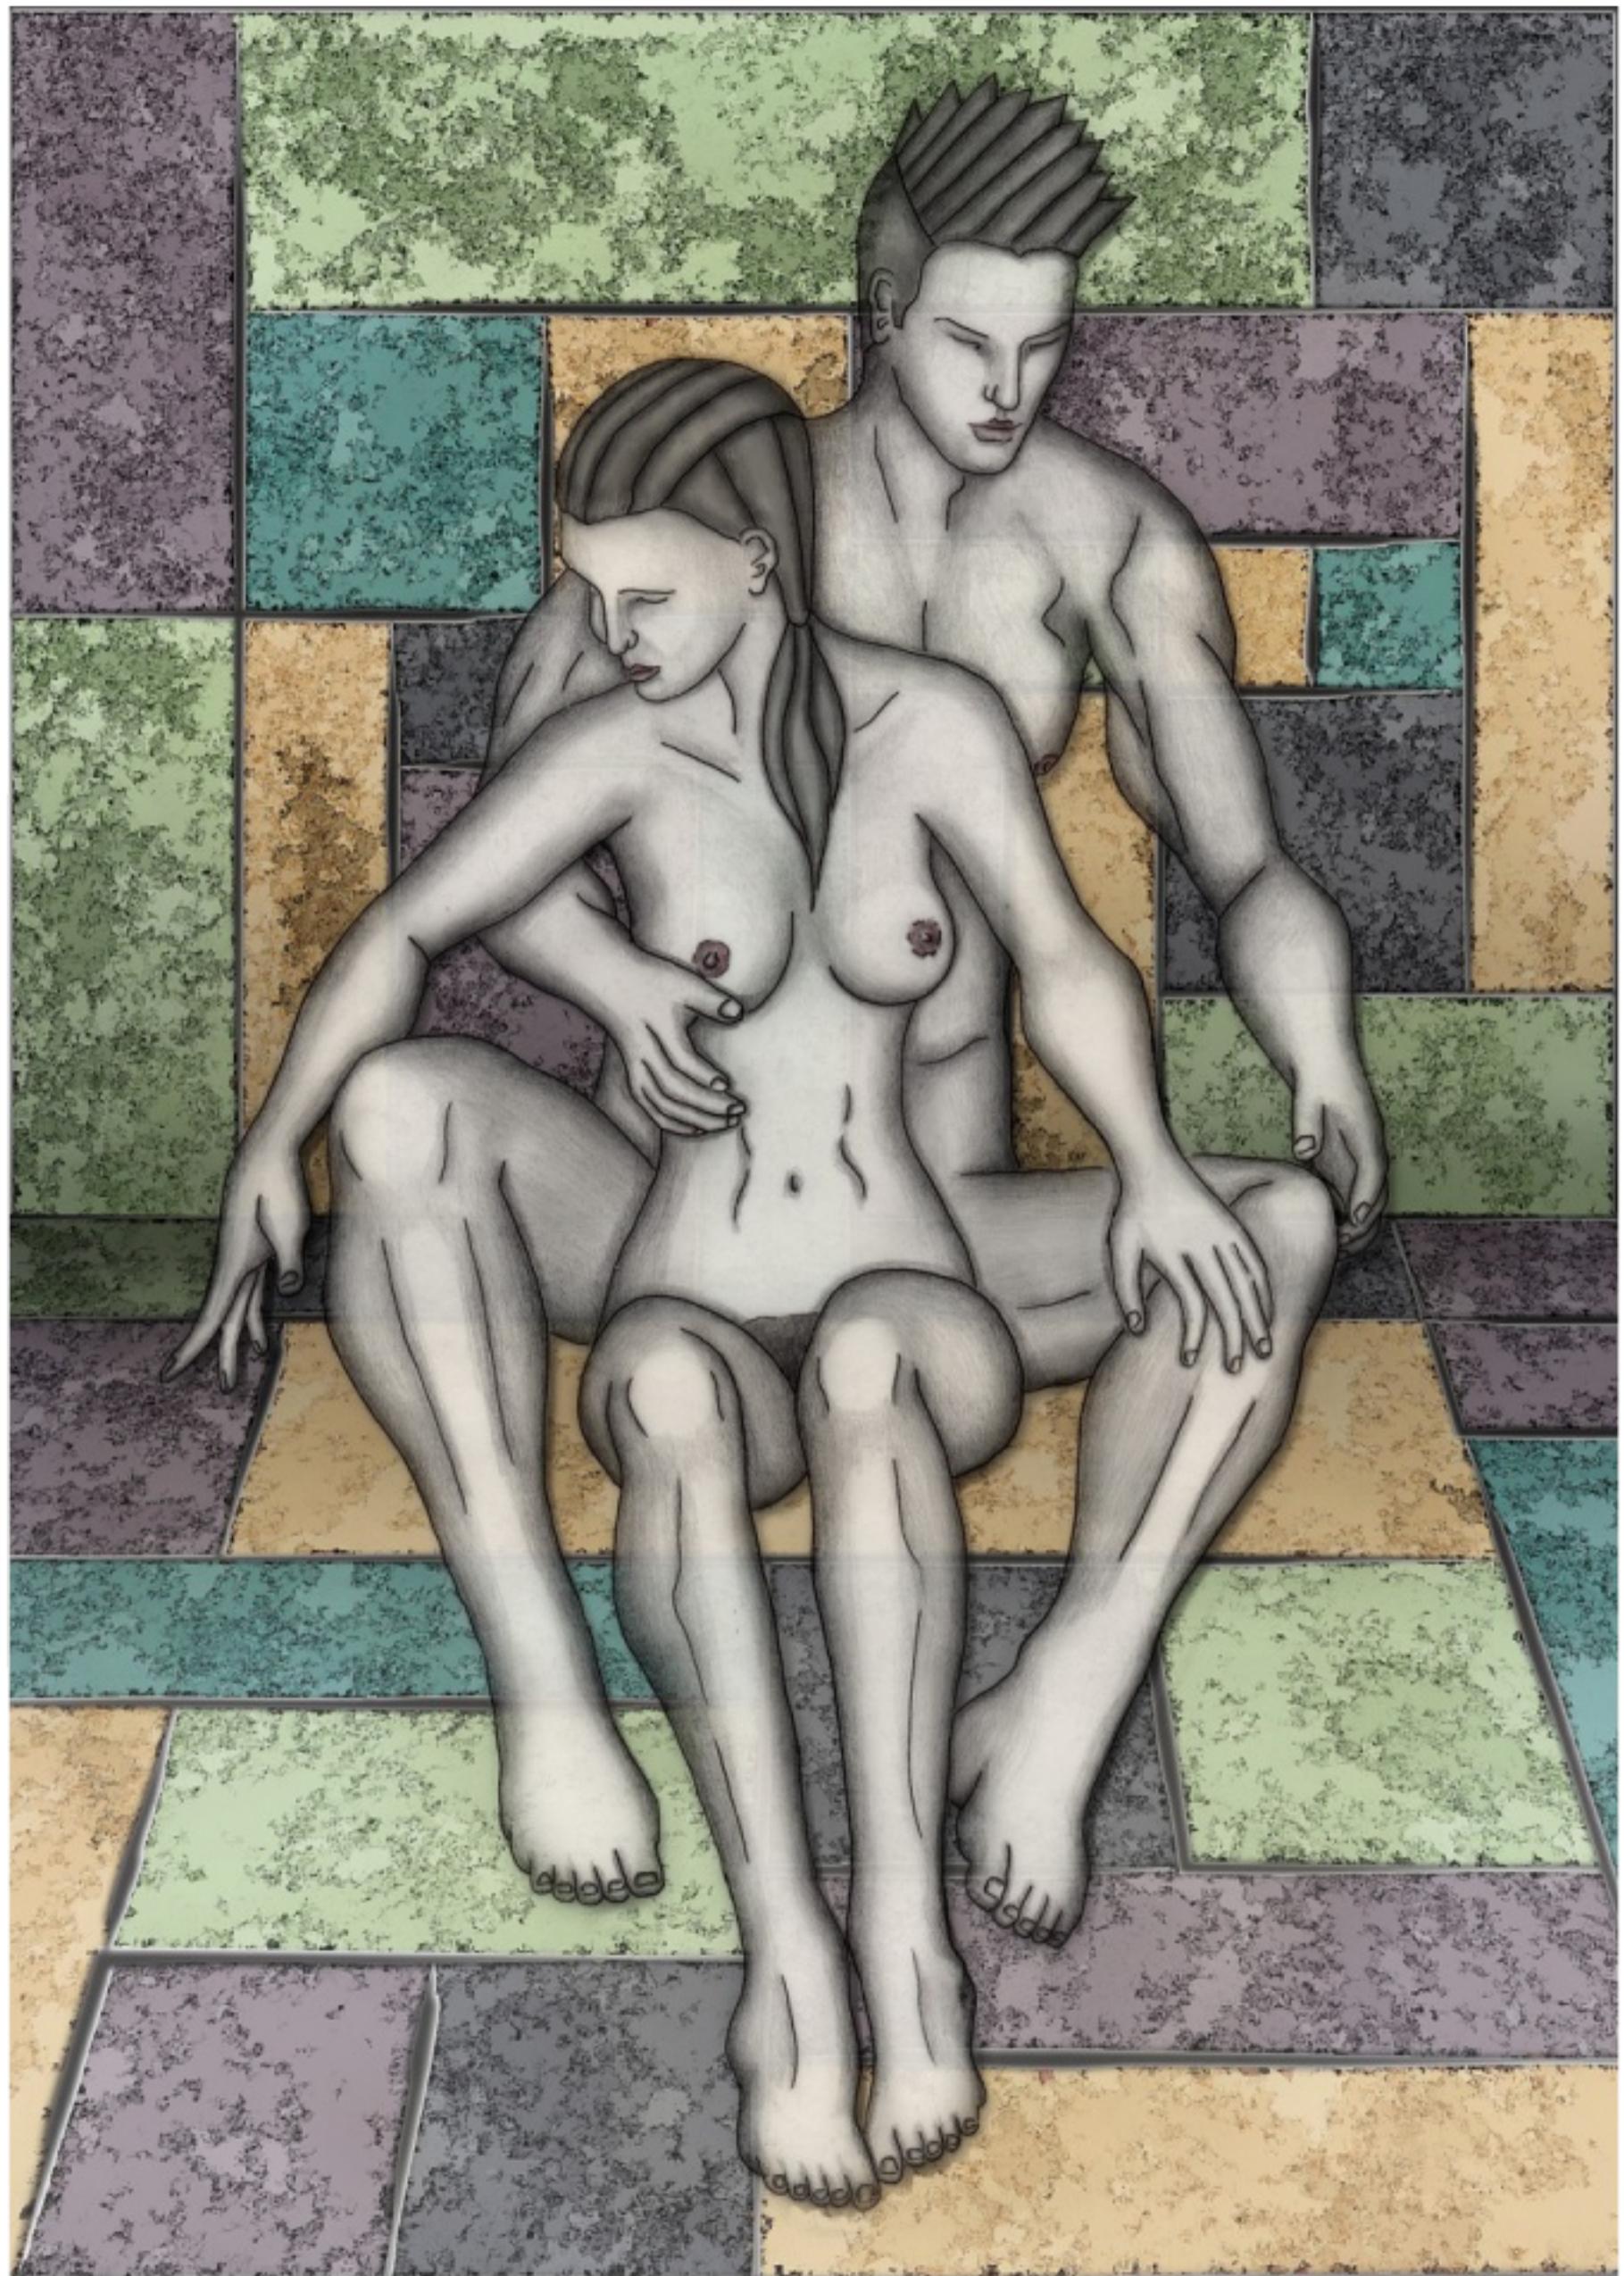

Sixties Hippy Ch

I watched as a new morality
obtained its definition.

Virtue shuttering in the wake
of lurid truths exposed....

And Shame falling....at the wayside...
unnoticed and quite dead.

Consequence without conscience
to "do your own thing".
And bras burning the path
for a woman's liberation.

Then torched…. wer
so men too.... could

How ungodly great t
on the herb of mariju
To yell-out the flower
of peace and easy lo
Consuming the elect
and preaching delus

The " hippy van" of p
painted daisies..... d
Peace Signs... comn
of a meaning.... neve

In a wanton quest fo
that was SOUGHT.

But never found!!!
